

HIGH CUBE HARDTOP CONTAINER

ISO Size Type Code: 45U6

40'

9'6"

2.9 m

This container type has been **designed and developed by Hapag-Lloyd**

- The 40' High Cube Hardtop container has been specially constructed for:
 - loading, e. g. by crane, through roof opening and door side
 - long cargo which cannot be loaded into the 40' general container
 - **heavy loads**
 - high and **excessively high loads**
- With the roof removed and the door header swung out, it is much easier to load cargo by forklift via the door side
- The two roof sections are fitted with devices to support lifting by forklift truck or crane. The weight of each steel roof section is approx. 450 kg (990 lbs)
- In case your cargo has an over-height, the roof sections can be lashed to a side wall inside the container using only approx. 13 cm (5' 1/8") of space
- Floor height 170 mm (ground level to interior floor surface, tolerance deviation possible)
- If required, we can provide disposable tarpaulins for transport that can be fastened to the walls on the outside using lashing devices
- The roof can be easily lifted by hand by 70 mm (2' 3/4"), using the roof-locking devices so that the door header can be swung out without removing the roof
- Please bear in mind the prevalent weight restrictions for inland transport
- Lashing devices – particularly suitable for transport of hanging garments racks
- Removable turnbuckle positioned dead center between both top rails. This may reduce the cargo height, if left in position and not stored
- For further information, please see our brochure "The Hardtop Container"
